

ABSTRACT OF THE DISCLOSURE

Sound source pulses are output to a sound drive circuit based on first to fourth sound source data of a ringer melody. Thus, the sound drive circuit drives a speaker based on the sound source pulses. As a result, the ringer melody including first to fourth melodic lines is output from the speaker. One melodic line is selected from the first to fourth melodic lines, and a melodic line pulse is outputted to a vibration drive circuit based on the sound source data of the selected melodic line. As a result, the vibration drive circuit drives a vibrator based on the melodic line pulse, so that the vibrator vibrates based on the selected melodic line.
